

## **Recombinant Porcine TGF**\(\beta\)1

Catalog Number: GR104039

# **Background**

TGF $\beta$ 1 (transforming growth factor beta 1) is one of three closely related mammalian members of the large TGF $\beta$  superfamily that share a characteristic cystine knot structure (17). TGF $\beta$ 1, 2 and 3 are highly pleiotropic cytokines that are proposed to act as cellular switches that regulate processes such as immune function, proliferation and epithelialmesenchymal transition (14). Each TGF $\beta$  isoform has some nonredundant functions; for TGF $\beta$ 1, mice with targeted deletion show defects in hematopoiesis and endothelial differentiation, and die of overwhelming inflammation (2). Human TGF $\beta$ 1 cDNA encodes a 390 amino acid (aa) precursor that contains a 29 aa signal peptide and a 361 aa proprotein (8). A furinlike convertase processes the proprotein to generate an Nterminal 249 aa latency associated peptide (LAP) and a C terminal 112 aa mature TGF  $\beta$ 1 (8, 9). Disulfidelinked homodimers of LAP and TGF $\beta$ 1 remain noncovalently associated after secretion, forming the small latent TGF $\beta$ 1 complex (8 10). Covalent linkage of LAP to one of three latent TGF $\beta$  binding proteins (LTBPs) creates a large latent complex that may interact with the extracellular matrix (9, 10). TGF $\beta$ 1 is activated from latency by pathways that include actions of the protease plasmin, matrix metalloproteases, thrombospondin 1 and a subset of integrins (10). Mature human TGF $\beta$ 1 shares 100% aa identity with pig, dog and cow TGF $\beta$ 1, and 99% aa identity with mouse, rat and horse TGF $\beta$ 1.

It demonstrates crossspecies activity (1). TGF $\beta$ 1 signaling begins with highaffinity binding to a type II ser/thr kinase receptor termed TGF  $\beta$  RII. This receptor then phosphorylates and activates a second ser/thr kinase receptor, TGF $\beta$  RI (also called activin receptorlike kinase (ALK) 5), or alternatively, ALK-1. This complex phosphorylates and activates Smad proteins that regulate transcription (3, 11, 12). Contributions of the accessory receptors betaglycan (also known as TGF $\beta$  RIII) and endoglin, or use of Smadin dependent signaling pathways, allow for disparate actions observed in response to TGF $\beta$  in different contexts (11).

# Recombinant Porcine TGF-β1

Catalog Number: GR104039

**Description** 

Source: Chinese Hamster Ovary cell derived

Composition: Ala279 –Ser390 Accession # NP\_999180.1

N-terminal Sequence Analysis: Ala279

**Predicted Molecular Mass:** 12.6 kDa (monomer)

#### **Specifications**

Activity Measured by its ability to inhibit the IL-4-dependent proliferation of HT-2 mouse T cells. Tsang,

M et al. (1995) 7:389. The ED50 for this effect is typically 40-200 pg/mL. **Endotoxin Level:** <1.2 EU per 1 μg of the protein by the LAL method.

**Purity:** >97%, by SDSPAGE under reducing conditions and visualized by silver stain.

Formulation: Lyophilized from a 0.2 µm filtered solution in Acetonitrile and TFA with BSA as a carrier

protein.

# **Preparation and Storage**

**Reconstitution:** Purified recombinant porcine TGF $\beta$ 1 is an extremely hydrophobic protein that adheres strongly to surfaces. To ensure recovery, reconstitute at 10  $\mu$ g/mL in sterile 4 mM HCl containing 1 mg/ml of human or bovine serum albumin.

**Shipping** The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature recommended below.

### Stability & Storage: Use a manual defrost freezer and avoid repeated freeze thaw cycles.

- 6 months from date of receipt, -20 to -70°C as supplied.
- 1 month, 2 to 8 °C under sterile conditions after reconstitution.
- 3 months, -20 to -70°C under sterile conditions after reconstitution.

#### **DECLARATION**

THIS REAGENT IS FOR IN VITRO LABORATORY TESTING AND RESEARCH USE ONLY. DO NOT USE IT FOR CLINICAL DIAGNOSTICS. DO NOT USE OR INJECT IT IN HUMANS AND ANIMALS.

# FOR LABORATORY RESEARCH USE ONLY NOT FOR USE IN HUMANS AND ANIMALS
